

# Piton de Bouillante by Mamelle de Petit-Bourg

Basse-Terre Nord - Petit-Bourg

Vue depuis le Piton de Bouillante (Emilie Savy / PNG)

*A challenging trail leading up to a fantastic panorama at the top. When the temperature is cooler here, bird lovers can enjoy the chance to listen to a number of different species.*

## Useful information

Practice : Walking

Duration : 6 h 30

Length : 11.1 km

Trek ascent : 964 m

Difficulty : Difficult

Type : Return trip

Themes : Geology

# Trek

**Departure** : near Col des Mamelles, Petit-Bourg

**Arrival** : near Col des Mamelles, Petit-Bourg

**Markings** :  PR (short hike network)

**Cities** : 1. Petit-Bourg  
2. Bouillante

## Altimetric profile

Min elevation 502 m    Max elevation 1067 m

## Hiking trail colour: yellow

Starting from the National Park information boards, take the start of the ridge trail (same start point as the Mamelle de Petit-Bourg trail). Go straight on at the first intersection. Walk over the wooden decking and stay on the same trail. At the next intersection, go straight on (the path leading right rejoins l'Habitation Soldat). Once you reach the top of Piton de Bouillante, the panoramic views are fully deserved after the last steep climb! Head back on to the same trail to return to the parking area.

*Alternatively, you can also head back down towards Bouillante from the summit, down to the "Village", "Bon Air" (ridge trail) or "Birloton" sections. You can also keep going on the GR1 path (red and white signs), towards the Trois Crêtes shelter.*

# All useful information

## **Is in the midst of the park**

The national park is an unrestricted natural area but subjected to regulations which must be known by all visitors.

## **Advices**

Pay attention to cars on Route RD23, as it is a major road.

There are no litter bins on the route, so please be considerate and take your rubbish with you.

Extra care should be taken in this natural environment, as Guadeloupe is prone to natural risks. For the benefit of all hikers, it is very important that you behave responsibly.

Please note : the parking area is not supervised.

## **How to come ?**

### Transports

Le conseil régional assure le réseau de transport interurbain avec des lignes de bus qui desservent tout l'archipel, par secteur géographique.

Voir : [https://www.regionguadeloupe.fr/les-actions-regionales/transport-interurbain/#\\_](https://www.regionguadeloupe.fr/les-actions-regionales/transport-interurbain/#_)

-> Pointe à Pitre / Baie-Mahault / Petit-Bourg / Pointe-Noire : ligne 115.

---

En Guadeloupe, 2 applications pour le covoiturage :

Dépozé : <https://depoze.fr>

KAROS : <https://www.karos.fr>

### Access

GPS coordinates of the start point : Lat : 16,17827 N - Long : 61,73176 W.

On Route de la Traversée (RD23), the parking area for the start of the trail is near to Col des Mamelles.

-> From Côte-sous-le-Vent (Bouillante / Pointe-Noire): 22 minutes after Col des Mamelles.

-> On the other side (Prise d'Eau, Petit Bourg): you will need to drive for around 4 km after Maison de la Forêt to find the start point.

You can park near the sign for the start of the trail that runs alongside Route RD23.

## Advised parking

Parking area at the bottom of la Mamelle de Petit-Bourg

---

## ✿ Balisiers (A)

A member of the Musaceae family, *Heliconia caribaea* is a large grass that is typical of the Lesser Antilles tropical rainforest, growing up to 5 metres tall. It flowers all year round, especially between April and June. Its inflorescence resembles a red ear or red ear with yellow trim, or sometimes completely yellow.

---

## ✿ The Yucca Plum Pine (B)

A member of the Podocarpaceae family, *Podocarpus coriaceus* is also known as the Yucca Plum Pine. Similar to conifers, the Yucca Plum Pine is an average-sized tree that can grow between 10-16 metres tall. It has leathery leaves that are similar to an oleander's. They are dark green on top, with a span of 6-15cm and virtually no petiole. Its flowers are discreet, but its brownish seeds in its red buds are certainly eye-catching. It has a thin layer of bark. This species is found throughout the West Indies and flowers mainly in December and January.

### ✿ Acomat boucan (D)

The Acomat boucan (*Sloanea caribaea*) belongs to the Elaeocarpaceae family. It is an extremely large tree that can reach up to 40 metres in height. It is the most spectacular tree in the *Sloanea* genus. It has an exposed trunk and magnificent buttresses. Its bark is reddish-brown and tends to flake off in thin strips when the tree ages. Formerly, visitors to the forest would make use of its enormous buttresses to shelter their fires and to smoke meat. It has since been established that lighting fires among the roots is not conducive to the well-being of trees.

### ✿ "Bwa bandé" (E)

*Richeria grandis* belongs to the Phyllanthaceae family. It is a large variety, distinctive for its tough leaves and reddish-brown bark that so often falls victim to rogue extraction. Also known as bwa bandé in Créole, it is renowned for its aphrodisiac qualities. Its wood is used as timber or in carpentry. It has very distinctive, green, grape-like fruits which form small pods and form copiously on its branches.

## ✿ Glomeropitcairnia penduliflora (H)

A member of the Bromeliaceae family, *Glomeropitcairnia penduliflora*, or "Zanana mawon" in Créole, is a tropical, epiphyte (living on other trees' branches) or terrestrial plant. It has straight, tough and thick leaves which, arranged in the format of rosettes, take in substantial levels of water and are even home to some frogs. It features a floral scarp in the middle.

Attribution : PNG

## ✿ Senecio lucidus (I)

*Senecio lucidus* belongs to the Asteraceae family. It is endemic to the Lesser Antilles. Its flowers are yellow-orange in colour. This plant is used in traditional Creole medicine because of its antiviral and pain-relieving qualities.

Attribution : Emilie Savy / PNG

## ✿ Clusia mangle (J)

*Clusia mangle* belongs to the Clusiaceae family. It thrives at 800 metres above sea level, where strong winds abound and there is constant humidity. It is a shrub with leathery, fleshy and shiny leaves. Its fruits, measuring between 1-2 centimetres, are similar to large yellow/green olives.

## ▲ Piton de Bouillante (K)

Piton de Bouillante stands at 1,088 metres above sea level. Its summit offers spectacular, panoramic views on a clear day.
