

Visit to Ilet du Gosier

Grande-Terre Ouest - Le Gosier

(AAMG)

The Ilet du Gosier is a coral island in a heavenly setting with idyllic landscapes and waters for days of relaxation.

Its history is closely linked to human settlements since the native American period. A large number of remains bear witness to these different settlements, with the most remarkable ones linked to the lighthouse keepers.

Useful information

Practice : Walking

Duration : 30 min

Length : 0.8 km

Difficulty : Very easy

Type : Loop

Themes : Cultural and architectural heritage, Discovery trail, Relaxation area

Trek

Departure : Ilet Gosier jetty

Arrival : Ilet Gosier jetty

Markings :  PR (short hike network)

Cities : 1. Le Gosier

Altimetric profile

Min elevation 0 m Max elevation 0 m

The trail begins behind the main beach on the island, in line with the jetty. You walk alongside the karbays and enter the vegetation. Go straight on along the path and head for the lighthouse and the panorama. Retrace your steps as far as the intersection, and then turn left.

You walk past the remains of a water tank. A few yards further on, follow the path to continue the circuit. Continue along the path all the way to the main beach.

Please note, a lot of small tracks might lead you off the trail.

On your path...

Lighthouse (A)

Beach and manchineel trees (C)

Pointe îlet panorama (B)

All useful information

Advices

You can take a round trip from the town to the island on a shuttle boat. The boats make the trip every 30 minutes and cost €5 per person (free for children under 4).

How to come ?

Transports

You can also take a "Karulis" bus to the jetty.

Access

GPS starting point: Lat: 16.20540°N - Long: 61.49691°W.

Arriving from Pointe-à-Pitre, take the same route as for Sainte-Anne along the D 119 road through the town of Le Gosier. Go to the jetty to take a shuttle boat.

On your path...

Lighthouse (A)

This is the 3rd lighthouse. It is 21 metres high and dates from 1932. The first was built in 1852 and the second in 1882. The frequent storms that sweep across the archipelago destroyed the two previous lighthouses. The present lighthouse is made up of two parts, with the technical facilities in the bottom third. The lighthouse has been automatic since 1973. The last lighthouse keepers left after Hurricane Hugo in 1989.

Pointe ilet panorama (B)

A view over the Gosier coast in Sainte-Anne, with a series of bays: Dupuy, Criquet, Bambou, Vinaigri. At this site you can also see the remains of the mooring cables from the wind turbine, the only source of energy at the time to power the lighthouse. The wind turbine was destroyed by Hurricane Hugo in 1989 and was replaced by solar panels.

Beach and manchineel trees (C)

There are many great spots for a swim on the western side of the island.

Watch out for the manchineel trees! The sap in these trees makes all of the tree toxic (leaves, blossom, bark, fruit). The trees are marked with a blue cross. You are strongly advised not to take shelter under them in the rain.
